

D4SS Dynamic Inquiry Tool

Assessment Data Update:

2010 Spring MME and MiAccess

We are pleased to announce the release of Spring 2010 MME and MiAccess assessment data. This new assessment data will be available in the dynamic inquiry tool today Tuesday, July 27th. The new data will be available in the following areas of the system:

- MME Inquiries
- MiAccess Inquiries
- CNA Reports – Grade Level and Subgroup Analysis tabs
- PA-25 Student Assessment Data Inquiry

CEPI Data Update:

SRSD Update

EOY 2009 SRSD data is now available via the Student History inquiry.

Dynamic Inquiry Tool Update:

The following updates and changes are now available to dynamic inquiry tool users:

All Inquiries and Miscellaneous

1. Public vs. Non-Public Data in District, ISD, and State totals
 - The following business rules have been implemented:
 - Public schools should only be compared with other public schools at the district, isd, and state level (i.e., non-public schools should be filtered out of the aggregate totals at the district, isd, and state levels)
 - Non-Public schools should only be compared with other non-public schools at the district, isd, and state level (i.e., public schools should be filtered out of the aggregate totals at the district, isd, and state levels)
 - The following inquiries were reviewed and modified (these are the only inquiries / reports that display district, isd, and state aggregate information):
 1. MEAP Proficiency
 2. MME Proficiency
 3. MI-Access Proficiency
 4. CNA Subgroup Analysis
 5. PA-25 Student Assessment Data
2. Bulk User Load
 - Add the ability to load multiple users at one time; access to this function is limited to users with the appropriate permissions (users with “user administration” privileges)
 - This function is available from the new Bulk Load tab on the Administer Users menu item (NOTE: as before, only users with “user administration” privileges will see the Administer Users menu item.)

3. User Administration changes
 - On the Add User screen, information entered regarding the user - e.g., work phone, home phone, passwords, etc. - is lost if/when the user changes one of the configurable permissions. The system will now save this information.
 - The Reset Password function has been merged into the Edit User function (tab); the Reset Password tab has been eliminated.
4. School drop-down filter
 - Filter the school drop-down listing on the assessment inquiries – MEAP, MME, and MI-Access - to display only schools with assessment results for the given assessment. For example, on MEAP inquiries, only schools with MEAP assessment results will display in the drop-down; on MME inquiries, only schools with MME assessment results will display; on MI-Access inquiries, only schools with MI-Access assessment results will display.

Inquiry Specific

1. MEAP Cohort Analysis
 - Add AYP Subgroups to Cohort Analysis
 - Add a new view of the MEAP Cohort Analysis to allow for tracking of AYP subgroups
 - Inquiry Settings changes – enable user to select an AYP subgroup
 - Graph View, Tabular Results, and Student Data changes – change headers to reflect (subgroup of) students selected (All or subgroup); modify queries to pull the appropriate information
